REVIEW

by the National Scientific Consultant, Candidate of Legal Sciences, Associate Professor of the Department of Theory and History of the State and Law, Constitutional and Administrative Law of Al-Farabi Kazakh National University, D.A. Ospanova,

on the dissertation of Duisenkul Akzhan Gazizkyzy entitled "Legal Regulation of State Electronic Service: Current Problems and Ways to Improve", submitted for the degree of Doctor of Philosophy (PhD) in the specialty 8D04201 – Jurisprudence

In the process of building a democratic state, one of the main strategic objectives of modern Kazakhstan is the development of a state structure that meets international legal standards in the field of human rights and freedoms, as well as integration into the global community. In this regard, the implementation of constitutional principles and norms, the ideas of the Constitution, and the values enshrined therein constitute a fundamental task.

Today, information technologies are becoming increasingly important in ensuring the provision of public services to the population. The analysis of issues related to the legal regulation of state electronic services in Kazakhstan draws attention to such critical aspects as data security, accessibility of services, and the protection of citizens' rights.

In the period of building an information society, Kazakhstan must secure a worthy place in the global system, which is largely determined by the level of development of the information sector of the economy and education, the freedom of information exchange, and the degree of protection of information flows and resources of state institutions. Accordingly, one of the main strategic objectives of the country's national security is the provision of state electronic services and the safeguarding of information security of the individual, society, and the state, the legal and organizational foundations of which are laid down in the Constitution of the Republic of Kazakhstan.

Within the above-mentioned directions, it is extremely important to study and critically evaluate the development of public services, as well as to reconsider certain postulates and legal frameworks for regulating state electronic services. New theoretical and methodological foundations acquire special practical significance through the comprehensive study of the existing legal framework governing public services, the analysis of domestic and international experience in the legal regulation of relations in the field of state electronic services, the elaboration of possible solutions to current issues, and the improvement of the organizational and legal foundations for the provision of state electronic services, taking into account the practices of foreign countries that are applicable under the current conditions and specific circumstances of Kazakhstan.

In this regard, the dissertation of Duisenkul A.G. is of particular scientific interest and provides sufficient grounds to affirm that it addresses one of the most relevant topics of modern Kazakhstan.

The scientific novelty of the dissertation lies in the fact that, for the first time in Kazakhstani legal scholarship, questions are raised, and a comprehensive scientific study is conducted on the theoretical problems of constitutional and legal support for state electronic services and the information security of the individual, society, and the state in the Republic of Kazakhstan. The novelty of the dissertation is also determined by its relevance, scope, and practical significance, as well as by the absence of specialized analytical scientific research on the legal regulation of state electronic services and information security as a component of the national security of the Republic of Kazakhstan.

The dissertation research is characterized by a particularly comprehensive approach and an independent authorial position regarding the subject of study. The personal contribution of the candidate is reflected in the independent research, the acquisition, discussion, and generalization of scientific results, which have been confirmed in the candidate's published works and in the proposals aimed at improving current legislation. The study has been carried out at a high theoretical and methodological level, possesses substantial scientific and practical significance, and represents the outcome of thorough research on the given topic.

The conclusions and proposals of the dissertation are well-founded and novel, and they may serve as a basis for further scientific research and the improvement of existing legislation. The results are characterized by internal logical consistency, and the achievement of research objectives is ensured through the structured sections of the dissertation. The practical significance of the work lies in the possibility of applying its findings in legislative activity.

The level of scholarly preparation demonstrated by the dissertation submitted for defense makes it possible to conclude that the research conducted by Duisenkul Akzhan Gazizkyzy on the topic "Legal Regulation of State Electronic Service: Current Problems and Ways to Improve" submitted for the degree of Doctor of Philosophy (PhD) in the specialty 8D04201 – Jurisprudence, constitutes an independently completed, qualified, and comprehensive scientific work. The dissertation addresses key issues in the field of state electronic services and makes a significant scholarly contribution to the development of fundamental theoretical problems under the current conditions of economic and state development in the Republic of Kazakhstan.

In terms of topical relevance, as well as scientific and practical significance, the dissertation fully meets the requirements of the Rules on the Awarding of

Academic Degrees applicable to doctoral dissertations, and its author is worthy of being awarded the degree of Doctor of Philosophy (PhD).
